Dear hiring team,

I am applying for the Senior Product Manager role with Confidential Employer because it brings together the parts of product work where I am strongest: finding the business question, shaping the AI workflow, and making a technical product useful to customers. My background spans current AI product implementation, enterprise marketing intelligence, UX research, and eight years of Fortune 500 client leadership.

Through One Block Away, I lead client discovery and turn unclear questions into working AI POCs, demo flows, and roadmap decisions. I built WeReady's Bailey Intelligence dashboard around founder inputs, GitHub signals, government and academic sources, source health, risk scoring, and evidence trails. The case study is clear that source-linked semantic search is the next layer, not a feature I have already shipped. At Hedgehox, I turn recurring agency problems into governed AI workflows for claims review, evidence gaps, scoping, routing, and regulatory monitoring.

Earlier, I led research and UX strategy for Kinesso's marketing intelligence suite, used by more than 7,000 people across 22 white-label brands. Interviews, prototype testing, beta groups, behavioral analytics, and adoption data became roadmap priorities across more than 20 products. I also led research and design for Kanvas, a developer-first API services library, partnering with product and engineering on the roadmap and with C-suite stakeholders on monetization and go-to-market planning.

I would bring direct product, customer, and commercial leadership from adjacent AI and intelligence products. I would not present my background as production ownership of embeddings, Boolean search, knowledge graphs, or data pipelines. The useful bridge is my experience defining the customer problem, organizing source-backed workflows, translating technical behavior into decisions, and working with engineering and data partners to move a product from idea to a testable release.

I would welcome a conversation about how that mix could help the team build a competitive-intelligence product customers can trust and use.

Sincerely,

Wally Mostafa
