Dear Boulevard team,

Boulevard caught my attention because the Technical Account Manager role sits in a useful, high-trust place: close enough to the customer to understand what is really happening in the business, and close enough to product and engineering to turn that reality into better configuration, better adoption, and better escalation paths. For salons, spas, medspas, and other self-care businesses, the details matter. Appointment flow, staff capacity, client retention, front-desk pressure, and service quality all show up inside the product experience.

My titles have not always been TAM, but the through-line is very close to the work Boulevard needs: being the person who can understand a customer problem, translate it technically, keep the relationship steady, and bring the right internal teams to the table. I have spent 15 years across client strategy, account management, enterprise UX, product delivery, and working AI POCs. Earlier in my career I managed Fortune 500 healthcare clients with \$2M-\$50M+ budgets, translating brand goals, timelines, review needs, and production constraints across account, creative, UX, and development teams.

More recently, I have been much closer to the product itself. At Hedgehox, I help turn complex pharma agency needs into working AI product workflows for claim review, brief intake, scoping, routing, submission capture, and FDA signal monitoring. That has meant shaping demos, troubleshooting product logic, documenting behavior, and translating customer feedback into product decisions. At One Block Away, I build client-led POCs from first ask through prototype, demo, feedback cycles, and roadmap decisions, including ListingPal and the Bailey Intelligence dashboard.

I would not come in pretending to have spent years inside salon management software. I would come in with the habits that matter in a TAM seat: ask precise questions, learn the customer's operating model, separate symptoms from root causes, explain technical tradeoffs clearly, and make sure recurring issues do not stay isolated support stories. Boulevard's origin story, with founders working behind front desks before building, is exactly the product discipline I respect.

What I can bring is a useful mix for Boulevard: customer-facing account judgment, technical product fluency, workflow design, data-informed communication, and the ability to bridge customers with Product, Engineering, Support, Onboarding, and Account teams. I can help top accounts optimize how they use the platform, make complex issues easier to resolve, and turn customer feedback into cleaner playbooks and stronger product direction.

I would welcome the chance to talk about how I can help Boulevard's customers get more value from the platform after onboarding, and how my mix of account leadership, technical translation, and product execution could support retention, adoption, and expansion.
