Dear CREO hiring team,

I am applying for the CREO AI Enablement Consultant role because it brings together the work I have been building toward across healthcare client leadership, enterprise UX, and hands-on AI delivery. I know how to take an unclear business problem, run the discovery, shape a practical workflow, and give people something they can test and use. That is the thread connecting my account, product, research, and AI work.

At Hedgehox, I turn recurring pharma agency problems into AI tools for claim review, brief intake, scoping, review routing, submission capture, and regulatory monitoring. I built the functional Claims Detector POC, shaped the demo with investors, and secured an investor. The workflow identifies promotional claims, surfaces evidence gaps, and prepares audit-ready annotations for human review before MLR submission. It is practical AI built around the standards and judgment regulated teams already need.

My enablement experience comes from building the systems that help teams adopt a new way of working. At Kinesso, I built the first UX research practice across more than 20 products, led workshops on discovery and ecosystem mapping, and expanded that program to other IPG groups. I also helped grow a distributed design team from 2 to 30 and created onboarding, coaching, and performance-review systems with the Head of Design. The products supported more than 7,000 people across 22 brands, so the work had to be clear, repeatable, and useful after the workshop ended.

Earlier, I spent eight years managing Fortune 500 healthcare clients and brand budgets up to \$20M. That taught me how to run difficult conversations, translate between specialists and executives, keep regulated work moving, and make the next decision clear. Through One Block Away, I now apply that same discipline to client-led AI POCs built with Claude Code and Codex. I would welcome the chance to discuss how this mix could help CREO lead practical AI enablement programs for healthcare and life sciences clients.

Sincerely,

Wally Mostafa
