Dear S&P Global hiring team,

I am applying for S&P Global Market Intelligence's Lead Product Manager, MCP & AI Agents Platform role because the work sits close to the problems I have been solving: finding a useful AI product inside a complex workflow, making the requirements concrete, and carrying the idea into a working product. My recent work covers AI product strategy, agent-assisted POCs, governed review workflows, API product strategy, customer research, and enterprise product delivery.

At Hedgehox, I turn recurring pharma agency problems into AI tools for claim review, brief intake, scoping, review routing, submission capture, and regulatory monitoring. I built the functional Claims Detector POC, shaped the investor demo, and secured an investor. Through One Block Away, I lead client discovery and use Claude Code and Codex to build working POCs from unclear questions. The work stays close to the full product loop: requirements, workflow logic, interface and backend behavior, demos, and client iteration.

Earlier, I led research and design for Kanvas, Kinesso's developer-first API services library, partnering with product and engineering on roadmap priorities and with C-suite stakeholders on monetization and go-to-market planning. I also led research and strategy for an enterprise intelligence suite used by more than 7,000 people across 22 brands. Interviews, prototype testing, beta groups, behavioral analytics, and adoption data shaped the roadmap, while close work with product, engineering, and design kept decisions moving into delivery.

This would be a domain move from regulated healthcare and marketing technology into financial information products, and I have not owned an MCP connector ecosystem. The relevant bridge is the work itself: learning a complex domain, translating customer and data needs into a product model, aligning technical and business teams, and testing whether the product is useful. I would welcome a conversation about how that experience could support the MCP and AI Analyst roadmap inside iLEVEL.

Sincerely,

Wally Mostafa
