Dear Deloitte Human Capital team,

Your Humans x Machines work stood out because it is focused on the part of AI transformation that actually decides whether value shows up: how people, machines, evidence, and accountability fit together in the work. That is the lane I have been moving toward across AI implementation, enterprise UX, regulated healthcare workflows, and client strategy.

I bring 15 years of experience turning complex, cross-functional work into systems people can understand and use. At Hedgehox, I architect human-centered AI adoption across pharma agency workflows including brief intake, scoping, submission capture, review routing, MLR claim review, and FDA signal monitoring. The Claims Detector work redesigned human-machine collaboration around evidence gaps, annotations, review checkpoints, and governance. It moved one pharma route from 8 hours to 10 minutes and helped cut a planned 5-day launch to 2 days.

The same pattern shows up in my product and team leadership. At One Block Away, I turn ambiguous client AI questions into decision frameworks, prototypes, demo narratives, and next-step roadmaps. At Kinesso, I scaled product design from 2 to 30 people across the US and Poland while leading analytics, design-system, and workflow products used by 7,000+ users across 22 white-label brands. I also built the Digital Experience Audit workflow for scoring, benchmarks, recommendations, visualization, and presentation-ready strategy outputs.

What I would bring to Deloitte is practical work-design leadership inside AI change. I can facilitate working sessions, map human and machine roles, shape adoption narratives, translate data into executive-ready materials, and keep a workstream moving from ambiguous problem to usable operating model. I would not approach this as generic technology implementation. My value is helping leaders and teams see how work should change, what needs to be measured, where human judgment belongs, and how to make the new process credible enough for people to trust.

I would welcome the chance to discuss how my mix of AI workflow design, enterprise analytics, healthcare client strategy, and team leadership can support Deloitte's Organization, Workforce & Change work.
