Dear Tallwave hiring team,

I am applying for Tallwave's AI Deployment Strategist role because its hands-on shape matches the work I want to keep doing: diagnose how a team works, build a useful first version, and test it with the people who will use it. My background is more senior than the posting's target range, but my recent work is deliberately close to discovery and delivery. I am looking for a seat where I can stay in that loop while growing toward leading engagements.

At Hedgebox, I turn recurring pharma agency problems into AI tools for claim review, brief intake, scoping, review routing, submission capture, and regulatory monitoring. I built the functional Claims Detector POC, shaped the demo with investors, and secured an investor. The workflow identifies promotional claims, surfaces evidence gaps, and prepares audit-ready annotations for human review. That work has taught me to move quickly without treating model output as finished work.

Through One Block Away, I lead client discovery and use Claude Code and Codex to build working POCs from unclear questions. ListingPal turns basic property inputs into campaign material in under 90 seconds. WeReady combines live sources, risk scoring, and evidence trails in a startup-readiness dashboard. I stay with the work from product strategy and UX through workflow design, implementation, demo preparation, and client iteration.

Earlier, I built Kinesso's first UX research practice across more than 20 products and led workshops on product discovery, ecosystem mapping, innovation, and user research. I presented recommendations to executives and clients, and used interviews, prototype testing, beta groups, behavioral analytics, and adoption data to shape roadmap decisions. I also spent eight years managing Fortune 500 healthcare clients and budgets up to \$20M. I am comfortable asking direct questions, presenting to senior stakeholders, and keeping complicated work moving. I would like to discuss how that mix could help Tallwave put useful AI tools into real enterprise workflows.

Sincerely,

Wally Mostafa
