Dear Bnberry hiring team,

I am applying for Bnberry's Product Manager role with a clear understanding of the domain gap in my background: I have not worked on lodging platforms or owned a live reservation funnel. What I do bring is the product work around that domain: customer research, detailed journey and workflow design, product prioritization, adoption, analytics, and cross-functional delivery from discovery through working software.

At Kinesso, I built the first UX research practice across more than 20 products and led research and experience strategy for an enterprise platform suite used by more than 7,000 people across 22 brands. Interviews, prototype testing, beta groups, behavioral analytics, and adoption data shaped roadmap priorities for navigation, dashboards, personalization, and product support. I also helped turn channel scoring, benchmarks, and recommendations into a repeatable client-facing reporting workflow. That work taught me how to connect user friction, platform constraints, adoption, and business value in one product decision.

Today, through One Block Away, I own product strategy, UX, AI workflow design, front-end build, backend logic, demos, and client iteration from first ask through working prototype. ListingPal turns basic property inputs into MLS and SEO-ready content in under 90 seconds. Other products have started with an unclear business problem and become a structured workflow, testable product surface, and practical roadmap. That gives me a useful base for working with Marketing and specialists on search and AI discovery without claiming to be an SEO practitioner.

The lodging-specific learning curve would be the systems and commercial rules behind inventory, pricing, policy exceptions, failure cases, and funnel metrics. My way into a new domain is direct: interview the people who run it, map the exceptions, work through dependencies with Engineering, establish a baseline, ship a small change, and measure what happened. I have used that method across regulated healthcare and enterprise platforms. I would welcome a conversation about applying it to the guest journey and hotel workflows behind DBS.

Sincerely,

Wally Mostafa
